

Product Import-Export (PIE)

Product data management made easy

Developed as an add-on to Microsoft Dynamics 365 for Finance and Operations, PIE enables users to effectively manage product data for a large number of products in Dynamics 365. Once configured, PIE allows users to export product data and make modifications with the help of a predefined Excel template.

Without PIE, users have to face the hassle of inserting / updating product data manually. With PIE, users get one click option available to insert / update product data, which saves them time and effort.

High-level Functionalities

Product export

Export all / selected products. Modify product data and perform mass updates.

Product import

Add new product(s) to Dynamics 365.

Price activation

Update the product price using bulk update operation via import; approve all the price changes with a single click.

How Does It Work?

User adds new products and / or updates existing products in the template; for example, user can change the price, sizes, and names of productst

User exports the existing product data in the form of an Excel template

After adding / updating the product data, user imports the Excel template back to the system

As soon as the user imports the Excel template, the changes made are reflected in the system.

Key Benefits

Perform bulk import / export

Save time

Reduce human effort

Reduce common data entry errors
